

Council of European Dentists

MANUAL OF DENTAL PRACTICE 2026

Italy

Italy

Date of last revision: 02 October 2026

In the EU/EEA since	1958
Population (2025)	58 934 177
GDP PPP per capita (2023)	38 863
Currency	Euro € (EUR)
Official language	Italian
Italian healthcare follows a decentralised system, with responsibilities shared between the central government, 19 regions and 2 autonomous provinces. The National Health Service (Servizio Sanitaria Nazionale, SSN) provides national healthcare coverage to residents and national. The system is funded by national and regional taxation. There is limited public coverage of oral healthcare to targeted groups, including children under 14 years old, pregnant women, as well as socially vulnerable and people with chronic conditions or disabilities, with limited services included.	
Dental care is funded primarily through private dental insurance and spending.	
Number of dentists (active)	46.953
Active dentist to population ratio (per 100 000 inhabitants)	79,6
Members of Dental Association AIO	7.780
Members of Dental Association ANDI	27.114

CPD is a formal requirement for all dentists. 3 specialties are recognised, including Oral Surgery, Orthodontics and Paediatric Surgery. The training of dental office assistants has been formalised in 2022.

Government and healthcare in Italy

Italy is a parliamentary democratic republic. The President of the Republic is the Head of State. The Italian Parliament is bicameral and consists of the Chamber of Deputies (Camera dei Deputati, 400 members elected by popular vote for five-year terms) and the Senate of the Republic (Senato della Repubblica, 200 elected members serving five-year terms, plus a small number of life senators). Both chambers have equal legislative powers.

Italy has a decentralised system of government with significant administrative and political autonomy at a regional level. The country is divided into 20 regions, including 5 autonomous regions (Sicily, Sardinia, Aosta Valley, Trentino-Alto Adige/Südtirol, and Friuli-Venezia Giulia). Regions play a crucial role in the organisation and delivery of healthcare services, including oral healthcare. The national government is responsible for healthcare oversight.

The National Health Service (Servizio Sanitaria Nazionale – SSN) is primarily funded through general taxation, including national and regional taxes, rather than through social insurance contributions. Funds are allocated through the regions.

The central government establishes health coverage and a basic national benefits package under the SSN called LEAs - (Livelli essenziali di assistenza or Essential level of services), and not through a public health insurance system. Priority areas are determined through the National Health Plan and the national budget. LEA is determined jointly with regional governments through the so-called “*Conferenza Stato/Regioni*” (State/regional conference), who are also responsible for the planning, financing and organisation of healthcare.

The delivery and management of healthcare services is carried out by local health authorities (Aziende Sanitarie Locali, ASL) with funds allocated by the government.

		Year	Source
% GDP spent on all healthcare	8.4%	2023	OECD
% of this spent by government	73%	2023	OECD

Healthcare provision in Italy is characterised by a mixed public–private system under the SSN. Public providers operate alongside accredited private providers that deliver services reimbursed by the SSN. Co-payments, tickets and out-of-pocket payments complement the national public health system with exemptions existing for co-payments for children, older adults, people with chronic diseases, disabilities, or low income.

Oral healthcare remains, however, limited under Italian public health coverage, with coverage limited to basic, preventative and emergency dental care for targeted groups, including children under the age of 14, socially vulnerable individuals, people with disabilities, chronic or rare diseases, pregnant women and low-income citizens.

The SSN covers approximately only 5% of dental procedures.

Services include the treatment of caries, the diagnosis and monitoring of malocclusions and the treatment of severe orthodontic conditions, as well as acute pain, oral cancer and emergencies. The rate of dental care co-payments is fixed regionally, with some exemptions or reductions on co-payments for the groups mentioned above. Orthodontics dental prostheses are not covered under the SSN.

As a result, dental care in Italy is predominantly delivered privately (95%) and largely financed through out-of-pocket payments and private dental insurance. An estimated 21% of all private health expenditure represents dental care spending.

Education, Training and Registration

Undergraduate Education and Training

To enter dental school a student has to have completed secondary education (high school) and have a diploma. There is an entrance examination to dental school and a "numerus clausus" is applied to each school.

The *numerus clausus* is determined annually by the Italian Ministry of University and Research (MUR).

The *numerus clausus* for the 2025-2026 academic year was 1 224 places for public faculties and 500 places for private institutions.

Year of data	2025
Number of schools	39
Total number of dental students (2025-2026)*	10 950
* including students enrolled in public dental schools	7 920
* including students enrolled in private dental schools	3 660
Gender balance (% of female students)	52.2%
Duration of studies	6

The admission process changed between 2024 and 2025. All students wishing to obtain a medical degree (including dentists and veterinarians) must attend a preparatory semester. No admission test is required.

Following the completion of the first semester, each faculty applies a *numerus clausus*, with students ranked according to their GPA or average academic score.

Following a successful outcome of the national exam, students can carry-out their 6-year studies in either of the 39 different schools. Please see the list of schools and number of available places for each school at the bottom of this report.

All dental schools are located in universities as Faculties of Dentistry in Colleges of Medicine.

Students in the private dental schools are responsible for paying their own fees.

Students graduate with a single-cycle MSc master's degree in Dentistry and Dental Prosthetics (*Odontoiatria e Protesi Dentaria*). The degree is run as well as the quality of education is overseen by the Ministry of University and Research.

Foreign students must take the separate national IMAT 2025 exam as well as demonstrate a minimum B2 level in Italian to be admitted to dental studies.

Quality assurance for the dental schools is provided by the Ministry of University and Research.

Registration

Cost of registration	100-300€*
*the cost of registration varies depending on the region	

Dentists must register with one of the 106 provincial Chambers of the Federation of the Order of Surgeons and Dentists (*Federazione Nazionale Ordini dei Medici Chirurghi e degli*

Odontoiatri) to obtain the authorisation to practice. The relevant provincial Chamber is determined depending on the place of practice.

The registration list is held by the *Federazione Ordini dei Medici Chirurghi e degli Odontoiatri* - the competent authority for dentistry. The registration process is the same for all dentists, and there are no regulatory tests.

The amount of the annual registration fee varies as it is decided by each provincial branch medical/dental board.

Vocational Training (VT)

Separate vocational training is not mandatory for dentists in Italy. Vocational and clinical training is integrated into the 6 years of study.

Language requirements

Registering dentists must present proof of proficiency in the Italian language to a C1 level, or at the completion of graduation.

Continuing Professional Development (CPD)

CPD is mandatory for all dentists in Italy since 2002. Dentists are all required to acquire 150 verified CPD credits every three years with 50 credits a year, under the ECM system (*Educazione Continua in Medicina*). All activities providing ECM must be centrally approved, verified and accredited by Ministry of Health.

These credits are provided by a widespread number of activities. The relevant regional Chambers under the FNOMCEO are responsible for approval and oversight of organised CPD activities and of all ECM providers, by mandate of the Ministry of Health.

To obtain the ECM, all participants must carry-out a final test. CPD activities are free of charge for mandatory and voluntary schemes.

Specialist Training Requirements

Three specialties are recognised in Italy, including Orthodontics, Oral Surgery and, since 2016, Paediatric Dentistry with the official establishment of the School of Specialisation in Paediatric Dentistry.

Calls for applications for all three specialties open from mid-November to mid-December every year. Students must have graduated as a General Dentists prior to applying. All programmes are taught and carried out in Italian.

In each case formal training lasts for three years and takes place in a university. All specialist training lasts 3 years and is completely by an end-of-programme examination. The titles upon qualification are respectively:

- **Orthodontics:** *Diploma di specializzazione in 'Ortognatodonzia'* – 3 years – Postgraduate School of Orthodontics
- **Oral Surgery:** *Diploma di specializzazione in 'Chirurgia Odontostomatologica'* – 3 years – Postgraduate School of Oral Surgery

- **Paediatric Dentistry:** Diploma di specializzazione in Odontoiatria Pediatrica – 3 years – Postgraduate School of Paediatric Dentistry

Oral and Maxillofacial Surgery (OMFS) is also recognised in Italy but remains a medical specialty.

Workforce

Dentists

The dental workforce in Italy has grown steadily over the past decade, reflecting both an increase in trained dental practitioners and a strong tradition of dental education.

Italy has a well-developed dental education system with a numerous and increasing number of faculties and programs across the country. Imbalances remain across the country, with some regions seeing a surplus of general dentists.

Since 2024, dentists are authorised to be considered for leading roles in the SSN National Health System. These mandates were previously only reserved for specialists.

Year of data	2025
Total Registered	63.998
In active practice	46.953
Dentist to population ratio (per 100 000 inhab) *	79,6
Percentage female	36%
Foreign-trained dentists	NA
*Active dentists only	

95% of all dental care is delivered by private practices in Italy. An overarching majority of dentists are self-employed and practice privately (approximately 65%), with some dentists practising in public hospitals, universities and local health authorities, particularly for community or paediatric dentistry.

Income for independent self-employed dentists can range around €4 000 net per month. Publicly employed dentists can earn an average of approximately €3 000 net per month (European Health Observatory of Health Systems and Policies).

Movement of dentists across borders

According to the National Association of Italian Dentists (ANDI), an estimated 7% of dentists are qualified overseas.

Specialists

In Italy, three specialties, Oral Surgery, Orthodontics and Paediatric Dentistry are recognised, with Paediatric Dentistry being recognised in 2016. General dentists often acquire more than one specialty.

There is also a medical specialty of Oral Maxillo-facial surgery.

Most specialists work in private practice and see patients on referral from private practitioners.

Year of data	2022*
Oral Surgeons	25
Orthodontists	1370
Paediatric dentists	NA
*not updated, lack of recent available data	

Auxiliaries

3 types of dental auxiliaries are recognised in Italy, with the recent national harmonisation and official recognition in 2022 for the training and recruitment of dental chairside assistants.

Year of data	2025
Technicians	~13.336 (registered laboratories) / ~25.000 (estimated employed technicians)
Chairside assistants	~ Estimated between 46.000 (according to the AIASO*) - 60.000 (according to the National Statistics Institute - ISTAT)
Hygienists	~ 8 176

Dental Technicians

Dental technicians are trained in technical schools, in a three plus two-year course, required for obtaining the diploma of dental technician. After the first three years, students are required to take an examination to become 'Operatore meccanico odontotecnico,' which will authorise professional practice exclusively as an employee.

Successful completion of this examination grants a licence to practise independently. Students who pass this examination also obtain a diploma equivalent to secondary-school level education, which may subsequently provide access to university-level studies in Dentistry.

The qualification has to be registered to the *Camera di Commercio* (Chamber of Commerce) of each Province.

Dental Hygienists

Education and training are provided by universities and comprise three years of study, leading to a diploma that must be obtained before a dental hygienist may legally practise. Access to the course is subject to a numerus clausus, and candidates must pass an admission examination. There is no compulsory registration upon qualification.

A two-year postgraduate specialisation is also available.

Dental hygienists may only work under the prescription of a dentist. Their duties include providing oral hygiene and preventive care. Hygienists are not permitted to administer local anaesthesia. Most dental hygienists work as independent professionals, with no fixed fees.

Dental Office Assistants – Dental Chairside Assistants

In line with European regulations, Italy has normalized and harmonised the training of dental office assistants or *Assistente di Studio Odontoiatrico* (ASO).

There has been a recent decline in the number of practising chairside assistants.

To answer the training and cultural needs of the ASO, the National Association of Italian Dentists, ANDI, has been organising programmes for the training of dental office assistants. These programmes include a 700h course, theoretical and clinical training, completed by a final exam and mandatory continuing professional development starting 3 years after obtaining the initial authorisation to practice.

They are restricted to assisting the dentist at the chairside, including, for example, for sterilising instruments, mixing filling materials and undertaking administrative duties.

In addition to ASOs, Italy also recognises CSOs (*Collaboratore di Studio Odontoiatrico*), as administrative support and office management staff. CSO carry-out 90 hours of training in high-school, with the obtain of a diploma.
